

Smart Contract Specification

\$ASAP

Version 1.0 | October 2026

Overview

\$ASAP is a fixed-supply charity token with an automatic transaction tax that routes funds to a multi-signature charity wallet. The contract prioritizes transparency, security, and simplicity.

Core Parameters

- Chain: Solana (preferred) or Base
- Standard: SPL Token or ERC-20
- Total Supply: 1,000,000,000 \$ASAP (immutable)
- Decimals: 6 or 9

Transaction Tax

Total tax: 4%

- 2% → Charity multi-sig wallet
- 1% → Liquidity
- 1% → Marketing & operations

Certain addresses (charity wallet, liquidity pool, team) may be excluded from tax.

Security Features

- No mint function after deployment
- Liquidity locked for a minimum of 1 year
- Ownership renounced after configuration
- Third-party audit required before mainnet launch

Launch Sequence

- Deploy contract
- Add and lock liquidity
- Configure tax recipients
- Enable tax
- Renounce ownership
- Publish contract address and verification proofs

This specification is intended for developers and auditors. Final implementation must undergo independent security review.
